

InventoryPlus — Codebase Diagnostic Progress

A status report tracking the resolution of security, architectural, and quality issues.

Refactoring Progress Summary

Total Issues: 12	Pending: 10
Partially Solved: 2	Fully Solved: 0

Issue Resolution Tally

#	Category	Issue & Description	Severity	Status	Date Solved
1	Security	All endpoints use @csrf_exempt, disabling CSRF protection.	Critical	PENDING	-
2	Security	No authentication or authorization on any API endpoint.	Critical	PENDING	-
3	Data Integrity	Destructive delete-then-recreate pattern for spec updates.	High	PENDING	-
4	Architecture	Inventory.tsx monolithic god component (1,770 lines). <i>Refactored: Extracted AddDepartmentModal, AddMemberModal, EditSpecsModal. Reduced size by ~500 lines (~28%). Broken down Sidebar.tsx.</i>	High	PARTIAL	June 26-27, 2026
5	Architecture	No Django REST serializers — raw JSON parsing everywhere.	Medium	PENDING	-
6	Caching	localStorage caching causes stale field structures. <i>Refactored: Fixed specific DHCP and Omada Username structure sync. Generic utility pending.</i>	Medium	PARTIAL	June 24, 2026
7	Code Quality	Duplicate view function definitions in views.py (department_list).	Medium	PENDING	-
8	Code Quality	70+ inline style={{}} blocks in Inventory.tsx (no CSS classes/tokens).	Medium	PENDING	-
9	UX	9 silent console.error calls — zero user-facing error messages.	Medium	PENDING	-
10	Testing	tests.py is completely empty — zero automated tests.	Medium	PENDING	-
11	Data Integrity	Hardcoded demo data mixed into production component logic.	Low	PENDING	-
12	Validation	No format validation on IP addresses, MAC addresses, or dates.	Low	PENDING	-

Details of Progress Made

1. Monolithic God Component Refactoring (Issue 4 - Partial)

- **What was solved:** The 1,770-line Inventory.tsx component was broken down by extracting three main modal dialogs into separate, reusable files under src/shared/inventory/components/: AddDepartmentModal.tsx, AddMemberModal.tsx, and EditSpecsModal.tsx.
- **Folder Restructuring:** The Sidebar.tsx component was modularized into sub-components (SidebarButton.tsx, constants, types)

and state logic was extracted into custom hooks (useClock, useLocalStorage).

- **Result:** Inventory.tsx size reduced from 1,770 lines to ~1,280 lines (~28% reduction), improving readability and easing development.

2. Browser Caching / Stale Fields (Issue 6 - Partial)

- **What was solved:** Resolved synchronization bugs for workstation specifications. Converted the DHCP Enabled field to a Yes/No dropdown and synchronized the backend parser, resolving the immediate caching bugs for the network specifications.
