

InventoryPlus — Dashboard Integration & Modularization Report

Date: June 30, 2026

A comprehensive project record detailing the initial Dashboard integration, the modularization of UI components, and the system-wide RightSidebar layout state implementation.

1. Phase 1: Dashboard Integration & Routing

Built the core Dashboard.tsx file at src/components/Dashboard.tsx and simplified the routing under App.tsx.

2. Phase 2: Component Refactoring & Modularization

Extracted display components inside src/shared/dashboard/components/: MetricsCards, AssetTable, DonutChart, and RecentActivity.

3. Phase 3: Shared RightSidebar Integration

Substituted custom PeopleSidebar with the system-wide RightSidebar, linking open/close selectors.

4. Updated Dashboard Architecture Map

File / Path	Role / Purpose	Status
src/components/Dashboard.tsx	Thin layout orchestrator composing cards, table, and sidebar.	Refactored [UPDATED]
shared/dashboard/components/AssetTable.tsx	Asset list, search, and pagination component.	Created [NEW]
shared/dashboard/components/MetricsCards.tsx	KPI metrics status cards.	Created [NEW]
src/features/navigation/RightSidebar.tsx	Shared system sidebar component.	Integrated [REUSED]
