

InventoryPlus — Dashboard Integration & Modularization Report

Date: June 30, 2026

A comprehensive project record detailing the initial Dashboard integration, the modularization of UI components, and the system-wide RightSidebar layout state implementation.

1. Phase 1: Dashboard Integration & Routing

To support real-time resource tracking and a high-fidelity visual experience, we designed and integrated the new Dashboard page view into the React frontend. The following milestones were achieved during Phase 1:

- **Created Dashboard.tsx:** Built the initial core component file at `src/components/Dashboard.tsx` matching the requested UI design mock, containing state filter bindings, custom-themed charts, and activity grids.
- **Simplified App.tsx View States:** Removed the redundant conditional check under index 0 and established a clean Boolean condition: `const isDashboardView = activeIndex === 2;`
- **Wired Render Trees:** Replaced the old placeholder rendering layout in `App.tsx` with a clean import and instantiation of `<Dashboard />` under the `isDashboardView` branch.
- **Browser Verification:** Loaded the site via the local server port 5173, verified click handlers, checked layout flow compatibility, and confirmed that search filtering operates smoothly.

2. App.tsx Routing Implementation

Below is the finalized rendering section in `src/App.tsx` executing the view selection:

```
return (
  <div className="app-layout">
    <SidebarNavigationSlimDemo
      activeIndex={activeIndex}
      onItemSelect={handleItemSelect}
      activeSub={activeSub}
      onSubSelect={handleSubSelect}
    />
    <main className={`app-main ${showRightSidebar ? 'sidebar-open' : ''}`>
      {isInventoryView ? (
        <Inventory
          key={resetKey}
          showRightSidebar={showRightSidebar}
          setShowRightSidebar={setShowRightSidebar}
        />
      ) : isDashboardView ? (
        <Dashboard />
      ) : (
        <div className="placeholder-view">
          <h2>{getCurrentViewName()} View</h2>
          <p>This section is currently under development...</p>
        </div>
      )}
    </main>
  </div>
);
```

3. Phase 2: Component Refactoring & Modularization

To ensure maintainability and code reusability, we extracted components from the monolithic Dashboard.tsx. Each isolated component is stored inside the dedicated src/shared/dashboard/components/ directory:

- **MetricsCards.tsx:** Renders the KPI counts (Total Assets, Active, Maintenance, Retired) with status trends.
- **AssetTable.tsx:** Features the paginated tabular list including category/status filtering, search, and action menus.
- **DonutChart.tsx:** Implements reusable conic-gradient layouts representing segments of asset statistics.
- **RecentActivity.tsx:** Displays the feed showing asset additions, updates, and updates.

4. Phase 3: Shared RightSidebar Integration

We replaced the custom PeopleSidebar and successfully wired up the project's shared RightSidebar, syncing the state to the App-level navigation system:

```
// Dashboard.tsx integrating RightSidebar
<RightSidebar
  isOpen={showRightSidebar}
  title="People"
  items={PEOPLE_ITEMS}
  onClose={() => {
    setShowRightSidebar(false);
    setSelectedPersonIndex(-1);
  }}
  initialSelectedIndex={selectedPersonIndex}
  onItemSelect={(_name, index) => setSelectedPersonIndex(index)}
/>
```

5. Updated Dashboard Architecture Map

File / Path	Role / Purpose	Status
src/components/Dashboard.tsx	Thin layout orchestrator composing cards, assets list, and right sidebar.	Refactored [UPDATED]
src/App.tsx	Layout manager that passes right-sidebar states and tracks active tabs.	Modified [UPDATED]
shared/dashboard/components/AssetTable.tsx	Paginated asset list component featuring filters and search.	Created [NEW]
shared/dashboard/components/MetricsCards.tsx	KPI cards rendering dashboard asset quantities and variations.	Created [NEW]
shared/dashboard/components/DonutChart.tsx	Dynamic conic-gradient visualizer components.	Created [NEW]
shared/dashboard/components/RecentActivity.tsx	Activity logs listing actions executed by team members.	Created [NEW]
src/features/navigation/RightSidebar.tsx	Shared system sidebar component showing lists with spring animations.	Integrated [REUSED]
